

### **Editor's Comment:**

I have critically gone through the Revised Manuscript entitled " The Role of Grain Legumes in Enhancing Soil Health and Promoting Sustainable Agricultural Practices: A Systematic Review" submitted by the authors.

Comments:

I have made some corrections in the edit mode on the face of the manuscript wherever possible, those were needed to improve the presentation.

- The title of review article may be modified as indicated.
- I have marked some sentences in "Green colour" i.e., Materials and Methods, Results and Discussion, those may be deleted. No materials and methods used as is done in original articles, it is not required, this being a review article.
- The production data on grass pea is not being mentioned in Table 1 though it is mentioned in the prior text.
- The statement highlighted in green in the 'Mixed Cropping' section appears to be confusing, if it really happens is questionable.
- Numbering of the listed references may be corrected.

The authors require incorporating the indicated corrections on the manuscript and highlighted statements may please be clarified accordingly.

My decision is, after complying with the above comments, the manuscript may be accepted for publication in the Journal of Experimental Agriculture International.
