

**Editor's Comment:**

I have reviewed the revised manuscript corresponding to editorial comments.

I have still some comments as follows.

1. Comment 2

The authors mentioned that they used the most suitable variety (VL Bhat) for better response to sulfur and increased yielding capacity in this field experiment. However, there is no data on screening of varieties for response to sulfur and yielding capacity. The data should be shown in Appendix

2. Comment 3

The authors answered "Yes, it was statistically analyzed (ANOVA)." However, there is no data on variance of individual characters in Table 1."

3. Comment 5

The authors answered "Yes, I agree with you." However, "Abstract" is not involved and "Results, Discussion and Conclusion" is not rearranged in the revised manuscript.
