

Editor's Comment:

- All abbreviations should be mentioned full out for the first time in the text.
- Furthermore, the follow order of the references has to be rearranged, e.g. [1,11,12,13,14].

The follow order of the figures is confusing. They should be renumbered. (([Fig1-2]. Brain computed tomography (CT) revealed three ischemic parenchymal lesions in the supratentorial region [Fig.5].))
