

Review Form 1.7

Journal Name:	Asian Journal of Medicine and Health
Manuscript Number:	Ms_AJMAH_117186
Title of the Manuscript:	ASSESSMENT OF NEONATAL MORTALITY AMONGST SICK NEONATES IN THE SPECIAL CARE BABY UNIT OF A TERTIARY INSTITUTION IN ORLU, NIGERIA
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <ol style="list-style-type: none"> 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>Corrections:-</p> <ol style="list-style-type: none"> 1. Results line 1 removed comma unnecessary with a following conjunction 'with' after 'SCBU' 2. Conclusion line 1 removed comma unnecessary with a following conjunction 'with' after 'high' 3. Conclusion last line removed 'and' typho error 4. Add 'and' between antenatal care services 5. First day mortality 130/948 (60.8%) 6. Remove comma after 'Nigeria' 4th line INTRODUCTION 7. Add 'mortality' after 'neonatal' 8. Actually birth asphyxia is leading cause of neonatal mortality though prematurity >37 weeks as stated however in discussion page 10 <p>"Essentially majority of these neonates may have died as a result of failure of adaptation to extra uterine life that required urgent resuscitation. Resuscitation of the small immature neonates required sophisticated and costly equipments, well trained efficient personnel and the right infrastructure such as electricity, clean potable water etc. Unfortunately, these requirements for successful resuscitation of the newborn babies are lacking in most tertiary health institutions, compounded by the paucity of well trained health workers (no thanks to the "Japa" migration syndrome). Thus, it is not surprising that 60.8% of neonatal death over the study period occurred within 24 hours of admission. These were mainly small premature babies and neonates with birth asphyxia who needed urgent resuscitation within the first few hours of admission to stay alive.</p> <p>As well conclusion noted 'Poor facilities for resuscitation/management of neonates within the first 24 hours of life are a major contributor to the high neonatal mortality rate'.</p> <p>And Case fatality rate is highest with neonatal respiratory distress in our SCBU at IMSUTH Orlu Most deaths occurred in the first 24 hours of admission into the SCBU at IMSUTH Orlu All indicate that birth asphyxia is the leading cause of mortality</p>	
<p>Minor REVISION comments</p> <ol style="list-style-type: none"> 1. Is language/English quality of the article suitable for scholarly communications? 		
<p>Optional/General comments</p>
