

Review Form 1.7

Journal Name:	Asian Journal of Pediatric Research
Manuscript Number:	Ms_AJPR_118221
Title of the Manuscript:	Outcome of Propranolol and in Combination with Intralesional Triamcinolone Therapy in Infantile Haemangioma
Type of the Article	Original Research Article

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Yes, it's an extensive and relevant study in a relatively common disease in Paediatric Surgical spectrum.</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>References are sufficient and relevant, but it would have been more impressive to include larger studies and meta-analyses conducted in last decade.</p> <p>1. In exclusion criteria, uncomplicated small IH of trunk and extremities and treatment failure cases are mentioned. Results quote small IH as well as trunk and extremities IH which are contrary to exclusion. 'Treatment failure cases' need to be elaborated.</p> <p>2. Oral Propranolol therapy has effect on the proliferative phase of IH which is upto 9 months as per the discussion. On the contrary, data includes 4 and 6 patients in group A and B respectively, ages of which aren't specified. In practice, Oral Propranolol therapy is recommended maximum upto 18 months age.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes, gramatically correct, but formatting errors need corrections e.g. IH is mentioned as ih at many places.</p>	
<p>Optional/General comments</p>	<p>Sample should have included a 3rd group of isolated Intralesional Triamcinolone injections and a 4th group of no treatment/only observation group as there are good chances of spontaneous regression. Then this study would have been more meaningful and comprehensive.</p>
