

Review Form 1.7

Journal Name:	South Asian Journal of Research in Microbiology
Manuscript Number:	Ms_SAJRM_117119
Title of the Manuscript:	Evaluation of Antibiogram Profile of Vibrio cholerae Isolates from Sea Foods and water samples from Cross River State, Nigeria
Type of the Article	

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <ol style="list-style-type: none"> Is the manuscript important for scientific community? (Please write few sentences on this manuscript) Is the title of the article suitable? (If not please suggest an alternative title) Is the abstract of the article comprehensive? Are subsections and structure of the manuscript appropriate? Do you think the manuscript is scientifically correct? Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>Comments to the Author In this paper the author discuss Vibrio cholerae from sea food and water isolates. The paper is good as it embraces the aspect of cholera, however I have following comments.</p> <p>Q1. From the abstract, the authors must indicate why the study is wholly randomized and also why they decided to carry out their study on those specific areas (North, Central and southern).</p> <p>Q2. From the introduction the authors need to include a paragraph on works that have been done as they narrow down to their study.</p> <p>Q3. Indicates the new strain that are resistance to drugs and the features that make them resistance.</p> <p>Q4. Vibrio cholerae is known to survive in alkaline Ph of 8.5 and also refrigeration under very low temperature the authors should be specific as they have indicated (APW+ 1MNaOH pH-8.4).</p> <p>Q5. There are 200 serogroups of Vibrio cholerae the authors only concentrated on the toxic 01 and 0139 what about the other serogroups although non-toxic but are known to become toxic under temperate bacteriophage.</p> <p>The article is good and after those minor corrections it should be considered for publications</p>	
<p>Minor REVISION comments</p> <ol style="list-style-type: none"> Is language/English quality of the article suitable for scholarly communications? 		
<p>Optional/General comments</p>		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
