

Editor's Comment:

In the manuscript, the authors explored Cancer Onset and Progression: A Comprehensive Review of Carcinogens, Anticancer Treatments, and the Regulatory Framework.

The purpose and objectives of the study are relevant and significant.

The authors have not corrected all of the reviewers' comments.

1. For example, in the abstract they asked to make the structure clear. It is necessary to make points: purpose, methodology, results, and conclusion.

2. The manuscript is more of a review. You need to indicate this in the title.

3. At the end of the introduction, add the purpose of this review.

I recommend accepting the manuscript after correcting my comments.
