

### **Editor's Comment:**

Accepted after the revisions listed under the present Table

According to the declared aim of the study and conclusions, a more appropriate title would be "A Case Report on Diode Laser Excision of Focal Fibrous Hyperplasia"

In the Introduction section:

- please consider "1064 nanometers" instead of "1064 nanometer's"
- the goal of the case report cannot be to demonstrate the superiority of a treatment method/technique versus another one (a different type of study would be necessary for this purpose, with cases and controls). The authors should reformulate the aim of the study

In the Presentation of case section:

- the author should specify the clinic where the described intervention took place, and the time as well
- please give details concerning the general health status of the patient, any systemic treatments followed
- the titles of the Figures should be placed all in the same manner

In the Discussion section:

- please replace "subpar" with another term, as it is ambiguous
- 48 years is not "old aged" – please reconsider

The Conclusions are not supported by the results, please remove the final phrase.

The References are very old. Please replace, there are many studies available on this subject in the specialized literature, from the last five years.

THE AUTHORS DID NOT FOLLOW THE RECOMMENDATIONS OF THE REVIEWERS. PLEASE MAKE THE RECOMMENDED CHANGES.
