<p><b>Optional/General</b> comments</p>	<p>In the methodology section, the nutritional analysis procedure has to be included. It is simply mentioned as computed using table. How the formulated chikki was used to quantify the nutritional profile and the protocol for each nutrient should be included. The first parameter in organoleptic evaluation is appearance. So the image of all treatments for chikki has to be represented. In Figure 2, the notations in the graph and the details below the table did not match. Figure 3 should not be the line diagram. The parameters are unrelated. In the X axis different parameters are plotted. Different parameters cant be considered as a continuous data. It is a discrete data. So all should not be connected by lines</p>
