

Editor's Comment:

I have read the reviews and the manuscript and I find that the corrections asked by the second reviewer have not been properly implemented in the text.

The abstract needs to be more informative

Statistical analysis should be mentioned in M&M

The abbreviations should be explained by first appearance

The units used should follow the SI

How many number of plants were used per plot (replicate?)

The name of the cultivar should be in capital letters (the first letter of the name).

I urge the authors to send us a point to point response to these remarks as well as to reviewer-2 remarks (a statement of 'Revision made' is not enough).
