

Editor's Comment:

This paper is titled "On the convolution of the k–Lucas sequences" is interesting.

This research is on studying convolution operations involving k-Lucas sequences. This provides a clear direction for readers interested in this specific area of mathematics. Convolution operations are fundamental in various mathematical contexts, and studying their application to specific sequences, such as k-Lucas sequences, may lead to novel insights or applications. Therefore, the paper has the potential to contribute to the existing body of knowledge in mathematics.

The author addressed the main concerns from the reviews, the revised version of the manuscript appears to be good. It looks READY for publication.
