

**Editor's Comment:**

The paper is essential in the present circumstances. However, the topic of discussion is "Data as a source of energy". Here the concept is how "Data Is Reshaping the Global Energy Crisis Landscape" or contributing to green computing.

The authors are requested to remove ambiguities in the manuscript as they have mentioned the ways and means of "Data as a source of energy" because the graph of energy consumption should be related to the topic.

There are some interesting observations. The paper may be accepted for publication.
