

**Review Form 1.7**

Journal Name:	<b>Asian Journal of Research in Infectious Diseases</b>
Manuscript Number:	<b>Ms_AJRID_114632</b>
Title of the Manuscript:	<b>Compendium: Management of Viral Hemorrhagic Fever (VHFs), involving its Pathogenesis</b>
Type of the Article	

**Review Form 1.7**

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p><b>Compulsory REVISION comments</b></p> <ol style="list-style-type: none"> <li><b>Is the manuscript important for scientific community?</b> (Please write few sentences on this manuscript)</li> <li><b>Is the title of the article suitable?</b> (If not please suggest an alternative title)</li> <li><b>Is the abstract of the article comprehensive?</b></li> <li><b>Are subsections and structure of the manuscript appropriate?</b></li> <li><b>Do you think the manuscript is scientifically correct?</b></li> <li><b>Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</b></li> </ol> <p><b><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></b></p>	<ol style="list-style-type: none"> <li>A manuscript focusing on the management of Viral Hemorrhagic Fever (VHFs) and its pathogenesis would likely be important for the scientific community. VHFs are a group of severe and potentially life-threatening illnesses caused by various viruses. Understanding the pathogenesis of these diseases and developing effective management strategies are crucial for public health preparedness and the development of treatments. Researchers and healthcare professionals would likely find such a manuscript valuable for advancing knowledge in this field.</li> <li>The title "Management of Viral Hemorrhagic Fever (VHFs), involving its Pathogenesis" could be made clearer to ensure that it accurately reflects the content of the article. Here are several considerations and a proposed revision:             <ol style="list-style-type: none"> <li><b>Specificity:</b> The title should provide a clear indication of the article's scope. Does the article focus solely on management strategies, or does it also detail the pathogenesis of VHFs? If it covers both topics, the title should reflect this.</li> <li><b>Clarity:</b> The phrase "involving its pathogenesis" could be interpreted as slightly ambiguous. It is not immediately clear whether "involving" refers to the inclusion of pathogenesis in the management or if pathogenesis is discussed as a separate topic within the article.</li> <li><b>Terminology:</b> When referring to multiple diseases, the phrase "Viral Hemorrhagic Fevers" should be plural.</li> <li><b>Conciseness:</b> Aim to make the title concise but informative. It should be as short as possible while providing necessary information about what the article covers.</li> </ol> <p>Considering these points, a better title might be:</p> <p>"Management and Pathogenesis of Viral Hemorrhagic Fevers: A Comprehensive Review"</p> <p>This revised title indicates that the article provides a comprehensive overview of VHFs, covering both the management strategies and the pathogenesis without ambiguity. This title clearly signals to the reader what to expect from the article.</p></li> <li>The abstract provided covers a wide range of topics related to viral hemorrhagic fevers (VHFs) and provides an overview of the various viruses, their classifications, and the challenges in diagnosis. It mentions the origins of the concept of VHFs, common occurrences in India, and the difficulties in diagnosing VHFs due to overlapping symptoms with other illnesses. Additionally, it highlights that the review article will cover the pathophysiology, etiology, diagnosis, treatment, symptoms, and indicators of VHFs. Overall, the abstract is comprehensive in providing an overview of the content covered in the review article.</li> <li>The structure and subsections of a manuscript should be appropriate for the type of document being written, as well as the conventions of the specific field or publication venue. Here are some general guidelines for structuring a manuscript:</li> </ol> <p>Title Page: The title page typically includes the title of the manuscript, the names and affiliations of the authors, and the contact information for the corresponding author. It may</p>	

Review Form 1.7

	<p>also include a word count, running head, and any acknowledgements or disclaimers.</p> <p><b>Abstract:</b> The abstract provides a concise summary of the manuscript, including the research question, methods, results, and conclusions. It should be informative and engaging, yet self-contained.</p> <p><b>Keywords:</b> A list of keywords or phrases that are relevant to the content of the manuscript. These help with indexing and searching for the document.</p> <p><b>Introduction:</b> The introduction provides background information on the topic, outlines the research question or problem being addressed, and highlights the significance of the study. It should also clearly state the purpose or aim of the manuscript.</p> <p><b>Literature Review:</b> If applicable, a literature review presents the existing research and scholarship related to the topic of the manuscript. It should provide context for the current study and demonstrate how it builds upon or contributes to the existing literature.</p> <p><b>Methods:</b> The methods section outlines the research design, data collection procedures, and analysis techniques used in the study. It should provide enough detail for the study to be replicable by other researchers.</p> <p><b>Results:</b> The results section presents the findings of the study in a clear and organized manner. This may include statistical analyses, data visualizations, and other relevant information.</p> <p><b>Discussion:</b> The discussion section interprets the results in the context of the research question and relevant literature. It may also address limitations of the study and suggest directions for future research.</p> <p><b>Conclusion:</b> The conclusion summarizes the key findings and implications of the study. It may also highlight the significance of the research and its potential impact.</p> <p><b>References:</b> A list of works cited in the manuscript, formatted according to the citation style required by the publication venue.</p> <p><b>Appendices:</b> Appendices can be used to include supplemental material such as raw data, questionnaires, or detailed methodological information that is too extensive to include in the main body of the manuscript.</p> <p>In addition to these general sections, the specific structure of the manuscript may be influenced by the requirements of the target journal or publication venue. Some journals have specific formatting guidelines and may require additional sections, such as a funding statement, conflicts of interest statement, or author contributions statement.</p> <p>It's important to carefully review the author guidelines provided by the target journal or publication venue to ensure that the manuscript is structured appropriately and that all necessary sections are included. Adhering to these guidelines will help ensure that the manuscript meets the expectations of the intended audience and is suitable for publication.</p> <p><b>5.</b> I don't have the capability to evaluate the scientific accuracy of specific manuscripts or research papers. Assessing the scientific correctness of a manuscript typically requires expertise in the specific field of study, such as virology, infectious diseases, or immunology.</p> <p>When evaluating the scientific correctness of a manuscript on the management of viral hemorrhagic fever (VHF) and its pathogenesis, considerations may include:</p> <p><b>1. Credibility of Sources:</b> Are the sources of information cited in the manuscript from</p>

**Review Form 1.7**

	<p>reputable, peer-reviewed journals and other reliable sources in the field of virology and infectious diseases?</p> <p>2. Methodology: Does the manuscript provide clear and thorough descriptions of the research methods used in studying the pathogenesis of viral hemorrhagic fever? Are the methods appropriate for the research question being addressed?</p> <p>3. Data Analysis: Are the results and data analysis presented in a scientifically rigorous manner, with appropriate statistical analyses if applicable?</p> <p>6. Certainly! When creating references for a manuscript, it's important to follow a standardized format to ensure accuracy and consistency. The specific format may depend on the style guide recommended by the publication or the academic field</p>	
<p><b>Minor</b> REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	Yes	
<p><b>Optional/General</b> comments</p>		

**PART 2:**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
