

Review Form 1.7

Journal Name:	Asian Journal of Pediatric Research
Manuscript Number:	Ms_AJPR_113897
Title of the Manuscript:	Prevalence And Outcome of Paediatric Domestic Accidents in A Tertiary Health Facility in Rivers State, Nigeria
Type of the Article	Original Research Article

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <ol style="list-style-type: none"> 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<ol style="list-style-type: none"> 1. The manuscript is important for the scientific community, 2. The title is interesting , but the aspect of outcome is not sufficiently reflected in the study. Keep the title but emphasise the consequences of these accidents. 3. yes, but domestic accidents must appear in the summary. 4. yes 5. yes, after a few corrections, it can be published 6. yes, the references are sufficient and more than 60% are less than 5 years old 	
<p>Minor REVISION comments</p> <ol style="list-style-type: none"> 1. Is language/English quality of the article suitable for scholarly communications? 		
<p>Optional/General comments</p>	<p>introduction:In Africa, (please specify the countries corresponding to the proportions)</p> <p>methodology the characteristics are socio-demographic. In the socio-demographic characteristics: mention details of the child's environment (type of house, use of electricity, wood fires, etc.), parents' occupation (for example, use of toxic products by home hairdressers, etc.). In addition to the Chi-square test, you also used the Fischer exact test, please specify this in the methodology.</p> <p>results some confusion of epidemiological terms: prevalence not prevalence rate, mortality not mortality rate Why in the same study do you calculate the mean and the median, given the type of study, one is sufficient. the calculation of the standard deviation after that of the mean will determine whether or not the median is calculated. Do not say "see table" but a short introductory word and analyse the tables at the end, as well as the figures.</p> <p>Discussion The differences in prevalence rates in these studies could be attributed to environmental and cultural differences in the locales where these studies were carried out. For example, the safety of residential buildings could be different. In addition, parenting skills and child care practices in protecting children against injuries at home are also different and play a</p>
