

Editor's Comment:

- ✓ First with respect to reviewer opinion the paper needs many worksto be presented as a scientific and acceptable research paper.
- ✓ In abstract section: it should be divided into background, aim, material and methods briefly followed by results with only significant ones and finally the conclusion.
- ✓ The proposal title could be "***Anti-hyperlipidaemic effect of Moringa oleifera ethanol extract on high fat diet fed rat***".
- ✓ The number of approvalsof ethic committee not mentioned in both the original and revised manuscript.
- ✓ Experimental design is not well explained for example the role of Atorvastatin.
- ✓ What is the role of kidney function test as creatinine and urea?
- ✓ The results did not interpret well, the author mentioned only their results without any explanation how the extract did decrease the lipid profile biomarkers.

Final decision: ***major revisio.***
