Editorial decision manuscript number 2023/SAJSSE/115074

South Asia Journal of Social Studies and Economics.

Title: Productivity Improvement of Assembly Line-By-Line Balancing Technique

My editorial decision is to publish as is with minor corrections.

I suggest revised title: "Productivity Improvement of Assembly Line-By-Line Balancing Technique: Case Study Textile Manufacturing Company Karachi Pakistan."

The article is an impressive research article. The article is well-written, most interesting and important. The authors' main conclusions make good common sense to me.

Results showed a strategic reduction in machine requirements for Flat and Fitted Stitching Operations and an increase in machinery allocation for Pillow

Operations. This realignment of resources led to a more balanced production capacity across various stages of sheet set assembly. Additionally, the study led

to a refinement in manpower allocation, resulting in reduced workforce requirements for Flat and Fitted Sheet Checking and Pillow Checking processes. The

packing stage also saw improvements, with a reduction in required manpower from 29 to 27 individuals while increasing packing capacity.
