

Editor's Comment:

Soil is a major source for agricultural production and other agriculture-related sector to provide food security. However, the use of excessive chemical fertilizers for agricultural production created problems like saline soils and land degradation. Adding organic matter is the only solution to convert degraded lands into fertile land. The present study will be very useful and finding the solution to soil-related problems. Therefore, the manuscript can be accepted for publication.

Final Decision: The manuscript should be accepted for publication in Asian Soil Research Journal.
