

**Editor's Comment:**

The article seems like a review in the following sense

1. The article does not provide authentic/exact data on the techniques specified by the author.
2. The techniques used are indigenous/local which is traditionally used by the people.
3. It is a collective opinion and references are too much old.
4. If anybody puts the techniques for protection of prop roots of the banyan tree, then it would not be reproducible for the scientific community. It might be useful for gardeners.
- 5.. Remove materials and methods, results and discussion. put subheading as per the text.
6. Keywords suggested in text.

Hence the article may published as review article with the title " Grenn Banyan Tree and its prop roots protection techniques".
