

Review Form 1.7

Journal Name:	Asian Journal of Research and Reports in Gastroenterology
Manuscript Number:	Ms_AJRRGA_114194
Title of the Manuscript:	A Case of Severe CMV Colitis Complicated with Megacolon and Perforation in an Immunocompetent Prisoner
Type of the Article	Case study

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <ol style="list-style-type: none"> 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<ol style="list-style-type: none"> 1. In my opinion, I think this manuscript is important because it highlights a serious, life-threatening condition that can be treated if diagnosed early, hence the importance of the manuscript in order to keep this disease in our minds. 2. Yes it is. 3. Yes it is. 4. Yes they are. 5. Yes of course. 6. Yes they are. 	
<p>Minor REVISION comments</p> <ol style="list-style-type: none"> 1. Is language/English quality of the article suitable for scholarly communications? 	<p>There are many grammatical and spelling errors, please correct them</p>	
<p>Optional/General comments</p>	<p>I think the author should have discussed the reason for the transient improvement in the patient's condition. If CMV was the cause of septic shock when the patient was admitted to the hospital, why did the patient improve on antibiotics?? Isn't it possible that the patient had a bacterial infection that caused septic shock and improved on antibiotics, but the patient's severe condition and septicemia caused this patient's cytomegalovirus (CMV) to reactivate, causing the fever to return 14 days after admission? Many conditions such as sepsis, major surgery, or trauma may lead to reactivation of cytomegalovirus (CMV).</p> <p>The author can use the following articles:</p> <ol style="list-style-type: none"> 1- Alyazidi et al. The Potential Harm of Cytomegalovirus Infection in Immunocompetent Critically Ill Children. <i>Frontiers in Pediatrics</i>. 2018, April.doi: 10.3389/fped.2018.00096. 2- Frantzeskaki FG et al. Cytomegalovirus reactivation in a general, nonimmunosuppressed intensive care unit population: incidence, risk factors, associations with organ dysfunction, and inflammatory biomarkers. <i>J Crit Care</i>. 2015 Apr;30(2):276-81. doi:10.1016/j.jcrc.2014.10.002. 3- Eid el al. Cytomegalovirus viremia in an 11-year-Old child with sickle cell disease manifested only with fever, Case report. <i>Annals of Medicine and Surgery</i>. 2023, doi: 10.1097/MS9.0000000000000877.
