

### **Editor's Comment:**

Title Evaluation of physicochemical and microbiological parameters of drinking water packaged in plastic bags produced by 3 companies in Korhogo in northern Ivory Coast

Biotechnology Journal International

In addition to the revision comments I found the following.

1-Article title need to change to "Evaluation of Physicochemical and microbiological standards for quality Packaged drinking water in plastic bags produced by three Companies in Korhogo in northern Ivory Coast" to be more suitable.

2-The author needs to reformulate the abstract and rewritten with more details to include and indicate the obtained results.

3-Article topic is important for evaluating water quality, safety, standards and health effects in different areas of the world.

4- The introduction is short, need to reformulation, expand and supporting with modern references related to the topic of the article.

5-Author did not succeed in addressing materials and methods where lacks to the basic scientific information to improve and reliability of the article.

6-Statistical analyses need to be reviewed and link to the results and discussion.

7-Discussion must be supported by similar scientific studies for changes that occurred during the experiment in most parameters and compared with another related studies.

8-References of the manuscript not sufficient for cover the topics related to water quality, microbiology and health.

9-The reference 3 present in references list but not found in text (Red colour).

10- Reference, present after reference!!! (Red colour).

11-Authors must additional modern references that specifically focus on the physicochemical and microbiological parameters of drinking packaged water quality guidance standards.

12-The manuscript need to English language editor to improve the manuscript.

13-Author must explain parameters are important, chosen and how they roles together to improve the article presentation to be suitable to the all reader.

Decision

This article requires the author to do the following:

1- Do what is required from to 3 mentioned in this decision.

2- Rewrite abstract, introduction, methods and discussion.

3- The author makes the corrections shown in text as red colour..

Therefore,

After the author has done everything required above, the article may be suitable for publication in this journal.
