

Editor's Comment:

I carefully checked the revised version of manuscript 2024/AJAEES/115404, the reviewers' comments, and the authors' responses. Although, the manuscript has been improved, in my opinion, presents serious flaws and the reviewers' comments have been covered partly. I suggest that the authors give more attention to comments and suggestions and complete the manuscript with an in-depth presentation in sections such as the Introduction and literature review. My decision is: Major revision.
