<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p>Optional/General comments</p>	<p>The manuscript is very interesting but as a reviewer, I suggest that the model will be further extended to parametric estimation so as to more accurate and clearly understand the impact of the project on the society. (clearly distinguish between beneficiary and non-beneficiary) I hope the author will consider this as a gap and will do it in another version of the scientific study, for such parametric study I recommend either propensity score matching or difference in difference or any other compensation algorithms to make your study more clarity.</p>
