

Editor's Comment:

I have gone through the manuscript: "A Multicentric, Observational study ezilsartan to assess the efficacy, safety and tolerability in the management of hypertension in Indian population: ZEAL Study " for the Asian Journal of Cardiology Research The manuscript is important for the scientific community, especially for the health care providers. Further the manuscript also addresses the need for more data on newer antihypertensive agents in the Indian perspective, which is important for optimizing treatment strategies and improving outcomes for patients with hypertension

With due consideration the decision on the manuscript titled " A Multicentric, Observational study on Azilsartan to assess the efficacy, safety and tolerability in the management of hypertension in Indian population: ZEAL Study for the Asian Journal of Cardiology Research " is Accepted.
