

## Review Form 1.7

Journal Name:	Asian Journal of Applied Chemistry Research
Manuscript Number:	Ms_AJACR_117099
Title of the Manuscript:	Analysis of Iron (Fe) Content in Breast Milk of Breastfeeding Mothers
Type of the Article	Original Research Article

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p><b>Compulsory</b> REVISION comments</p> <ol style="list-style-type: none"> <li>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</li> <li>2. Is the title of the article suitable? (If not please suggest an alternative title)</li> <li>3. Is the abstract of the article comprehensive?</li> <li>4. Are subsections and structure of the manuscript appropriate?</li> <li>5. Do you think the manuscript is scientifically correct?</li> <li>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</li> </ol> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>The manuscript is important for scientific community. Anaemia in pregnancy plays a great role in both the unborn child and the mother hence understanding of the levels helps in guiding in terms of health education. The title of the article is suitable.</p> <p>The abstract is quite comprehensive.</p> <p>The subsection of the manuscript is appropriate.</p> <p>The manuscript is scientifically correct.</p> <p>The references are sufficient.</p>	
<p><b>Minor</b> REVISION comments</p> <ol style="list-style-type: none"> <li>1. Is language/English quality of the article suitable for scholarly communications?</li> </ol>	<p>The language is suitable for scholarly communication</p>	
<p><b>Optional/General</b> comments</p>	<p>With the results of the research which indicate , there were no significant differences in Fe levels in breast milk samples from breastfeeding mothers in the categories of no anemia (normal), mild anemia, and moderate anemia. However, it is still recommended that it is very important to ensure sufficient iron in breast milk to help the baby's growth and development.Hence there is need to do further research and assess the impact of low Fe levels of mothers to the babies.</p>
