<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes, the language/English quality of the article is suitable for scholarly communications</p>	
<p>Optional/General comments</p>	<p>Acute Intussusception though encountered most commonly in children, with peak incidence between 5 to 10 months of age, 90% cases are idiopathic. But in older children and adults intussusception is associated with a pathological lead point such as Meckel's diverticulum, polyp, duplication, Henoch Schonlein purpura or appendix. The ileocecal intussusception because of appendix has been well documented</p>
