India is the second largest producer and consumer of wheat after China. Therefore, the application of organic fertilizers year after year improves physical and chemical conditions by providing suitable soil structure, enhancing the cation exchange capacity of the soil, increasing the amount and availability of plant nutrients, increasing the humus content, and providing the substrate. As for microbial activities, the use of biological waste as an alternative to chemical fertilizers helps reduce soil contamination with chemicals, as well as compensate for the lack of nutrients. Therefore, this research was a step towards restoring the balance of soil elements naturally instead of simply adding them through chemical fertilizers.</p> <p>2. unsuitable I suggest changing the title to (Effect of INM on the productivity and characteristics of wheat crop <i>Triticum aestivum</i> L.</p> <p>3.
