

Editor's Comment:

Accepted after the revisions listed

- the article needs extensive correction of the English language
- the Introduction section needs reformulation and reorganization, because some sentences are repeated and it's confusing to the reader
- the author should specify the clinic where the described intervention took place, and the time as well
- the ethical aspects should be addressed (ethical approval provided by the institutional committee)
- paragraph 2 of the Case presentation section: what is "open irt"? Please explain or change
- please change abbreviation "alveolus wrt#36 region"
- RCT, IOPA – abbreviations should be explained the first time they appear in text
- the titles of the figures should be written in the same style, according to the recommendations available on journal site
- Figure 2 – please complete the title as recommended by reviewer
- in the Discussion section the authors should also discuss about similar cases in the literature. The Discussion section is too brief.
- the Conclusions should refer to the presented case, not to general aspects from literature; this section should be changed accordingly in the Abstract
- most of the references are old (much older than 5 years). Please replace with newer references (not only one).
