

Editor's Comment:

I have completed my final review of the manuscript titled "Hospital Acquired Infection Revisited: Route of Transmission," submitted by our esteemed colleagues for publication in the International Journal of Pathogen Research.

The manuscript has undergone rigorous peer review, involving detailed evaluations by two external reviewers. The feedback received has been predominantly positive, highlighting the manuscript's relevance and its thorough approach to an important medical issue. Subsequent to the reviews, the authors have addressed the initial concerns raised, resulting in significant improvements to the content.

The revised manuscript has adequately incorporated the suggested amendments concerning both the depth of content and the clarity of the exposition. Nonetheless, minor revisions are still needed to achieve optimal presentation:

Language and Grammar Corrections:

To further refine readability and maintain a professional tone throughout the document.

Consistency in Referencing:

Ensuring all references are appropriately formatted in line with the journal's guidelines.

Verification of Statistical Data:

It is essential to confirm the accuracy of all statistical data presented, given the scientific implications of the study.

Conclusion and Action Items:

The manuscript significantly contributes to our understanding of nosocomial infections and offers robust analysis backed by comprehensive data. I recommend accepting this manuscript for publication, contingent upon the successful implementation of the minor revisions noted above.
