

Review Form 3

Journal Name:	Journal of Advances in Biology & Biotechnology
Manuscript Number:	Ms_JABB_125019
Title of the Manuscript:	Studies on Genetic Variability and Character Association in Chickpea Genotypes for Growth and Yield Attributes
Type of the Article	Original Research Article

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	The improvement in crop yield depends upon the magnitude of genetic variability available in breeding material. Association studies among the traits is important to rely on indirect selection where other than yield directly, yield attributing traits are given importance. In view of this the present study where variability and association studies were taken is important for the chickpea breeding programme.	
Is the title of the article suitable? (If not please suggest an alternative title)	Yes	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract is well written under meaningful subheads. The abstract is informative and easy to understand covering all the work done.	
Are subsections and structure of the manuscript appropriate?	Yes	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	The improvement in crop yield depends upon the magnitude of genetic variability available in breeding material. Association studies among the traits is important to rely on indirect selection where other than yield directly, yield attributing traits are given importance. In view of this the present study where variability and association studies were taken is important for the chickpea breeding programme.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	References given were sufficient and recent. However references should be written as per the journal format	
Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	The language and style of writing is very decent and understandable.	
Optional/General comments	The experiment is well designed and statistically sound. Methodology is very clearly presented. However it would add weightage if the scales for different variability parameters and formulas used were presented. Results were presented meaningfully but the discussion part should be well written. For citation in the text follow the journal guidelines.	

Review Form 3

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
