

### **Editor's Comment:**

Before making a definitive decision on the publication of this manuscript, I believe that the author should fully respond to the following recommendations from the "review form 3" reviewer:

-I will suggest this manuscript is restructured.

Title – Abstract- Introduction – Materials and Methods – Results and Discussion – Conclusion – References. "

-In Conclusions:

-How did you arrive at this? Based on literature provided, is there any stated level that checks the control chart? i.e. what is the accepted UCL and what is the accepted margin. Please find out and include it,

-Yassin and Mohamed is incompletely cited. The citation must be done in a "complete" way,

- I wish you compared the results from your method and see if it performs well compared to Schewart control based on Poisson regression.
