**PART1:ReviewComments**

<b>Compulsory</b> REVISIONcomments	<b>Reviewer's comment</b>	<b>Author's Feedback</b> (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p><b>Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.</b></p>	<p>This is a good article that provides new updates on the Tourette Syndrome treatment based on new discoveries made about the condition.</p>	
<p><b>Is the title of the article suitable? (If not please suggest an alternative title)</b></p>	<p>While it is appropriate, a better title will lend more credibility to the paper. Suggested title is "Advancements in Tourette Syndrome Treatment".</p>	
<p><b>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</b></p>	<p>Not really but there is what it can be improved:          "Tourette Syndrome is a chronic neuropsychiatric disorder that typically affects children, impacting their behavior, social interactions, and daily functioning. Present treatment strategies for Tourette Syndrome are generally categorized into two main types: (1) pharmacological (drug-based) and (2) non-pharmacological (non-drug-based). This paper reviews the current literature on both treatment approaches, but the primary focus provides updates on pharmacological interventions."</p>	
<p><b>Are subsections and structure of the manuscript appropriate?</b></p>	<p>Yes. Retain the subsections.</p>	
<p><b>Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.</b></p>	<p>This paper systematically reviews recent literature on both categories, with a primary emphasis on the latest developments in pharmacological treatments. It provides a general overview on the current Tourette Syndrome treatment approaches backed with proper citations and references. It makes a good sense that the paper has chosen the meta-analysis to examine the efficacy of selected Tourette Syndrome treatments to reduce tic severity in the condition and also summarizes existing recommendations about the treatment selection.</p>	
<p><b>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</b></p>	<p>Of the 20 references cited in the paper, only 8 or 40% are of more recent research publication. The author(s) may want to increase findings from latest published papers to raise the level of recent citations giving their paper a more robust evidence-based update.</p>	
<p><b>Minor</b>REVISIONcomments</p> <p><b>Is the language/English quality of the article suitable for scholarly communications?</b></p>	<p>Grammatically, it is okay but the author(s) may want to recheck the syntax to ensure smooth expression of their ideas presented in their paper.</p>	
<p><b>Optional/General</b>comments</p>	<p>Yes, it is an interesting paper on the updates of Tourette Syndrome treatment.</p>
