

Review Form 3

Journal Name:	Asian Research Journal of Agriculture
Manuscript Number:	Ms_ARJA_124997
Title of the Manuscript:	In vitro efficacy of different fungicides and bioagents for management wilt of watermelon [Citrullus lanatus] incited by Fusarium oxysporum f. sp. niveum
Type of the Article	Original Research Article

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.</p>	<p>Fusarium wilt is a very important problem for cucurbits, especially watermelon. Every stage of the plant experiences Fusarium wilt, which leads to complete product loss. In this study, the effects of different drugs were examined. In particular, the fact that the experiment was conducted in vitro saves space, and the degree to which the disease changes in a controlled environment is more clearly seen. However, very few sources are included in the introduction of the article. The material and method section should be given in more detail. How many petri dishes will there be in each repetition, what is the total number of petri dishes, should be written in detail. The discussion was compared with very few sources, and the differences or the reasons for similar results were not stated. In addition, the conclusion section should be written more comprehensively, the purpose should be emphasized, and the results should be written clearly.</p>	
<p>Is the title of the article suitable? (If not please suggest an alternative title)</p>	<p>Suitable.</p>	
<p>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</p>	<p>Suitable.</p>	
<p>Are subsections and structure of the manuscript appropriate?</p>	<p>Necessary edits have been made within the article.</p>	
<p>Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.</p>	<p>The necessary concentrations were given in the study. The study was conducted in a closed and sterile environment. Since there were controlled conditions, the results were clearly revealed. This proves its accuracy.</p>	
<p>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</p>	<p>The study was written without using sufficient and up-to-date sources and editing is suggested. More sources are needed, especially in the discussion section, and the reasons for the differences or similarities should be stated. There are many studies on watermelon and Fusarium wilt in the literature.</p>	
<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>	<p>Minor revision have been made to the article.</p>	
<p>Optional/General comments</p>	<p>The most important deficiency in the article is the referances. When the referances are insufficient, the accuracy of the article is affected. Because the introduction section in particular indicates whether the research has been done in terms of the article. In this sense, the introduction and discussion should be organized with new referances. The material and method section should be written more clearly.</p>
