

Editor's Comment:

1. Before The Conclusions, where the strategies are presented, a sub-title like Findings to be followed are welcome.

2.The Conclusions have to be related to these findings and strategies presented.

3. References are wrongly written. The list has to be written in the alphabetical order of the authors' last names. The first one is Augustine et al. (2021)..if it remains, or Berthon Pierre et al. (2012), and the last positions are Suryadi S. et al. (2021), also if it remains and Whiting A, and Williams D. (2013).

ok for publishing.
