

Review Form 3

Journal Name:	Journal of Advances in Medicine and Medical Research
Manuscript Number:	Ms_JAMMR_125600
Title of the Manuscript:	Angiotensin System Blockers In Experimental NAFLD/MASLD: Is There A Preferential Pathway Or Drug?
Type of the Article	Original Research Article

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	This manuscript is the beginning of the discovery of the effect of these blockers on non-alcoholic fatty liver disease directly through changes that occur in the angiotensin pathway, and that these changes are not in blood pressure but affect blood fluid volume and acid-base balance. This work is important for the scientific community in starting a broader discovery and a new look at this disease.	
Is the title of the article suitable? (If not please suggest an alternative title)	good	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	1- The introduction of the summary can be shortened to only three sentences and not exceed 50 words. 2- The second sentence of the objectives can be deleted for greater understanding 3- The practical method in the summary: The number of animals used in the groups can be deleted and mentioned within the method only, and it is sufficient to mention the groups and the type of diet only	
Are subsections and structure of the manuscript appropriate?	Good	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	The angiotensin pathway is very broad, and changes in its pathway affect the body's balance by signaling to various organs, including the balance of sodium and potassium. A change in the balance of minerals affects blood pressure, so this manuscript is very important to uncover other changes that occur within the angiotensin pathway in patients with non-alcoholic fatty liver disease	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	Regarding references: For such manuscripts, 70% of the references should have been recent and within the last 5 years. reference 19 and 20 should also be reviewed.	
<u>Minor</u> REVISION comments Is the language/English quality of the article suitable for scholarly communications?	yes	
<u>Optional/General</u> comments	As for the practical method, the concentration of the amount of drug doses used each time must be mentioned in detail. Was the amount of the dose used relative to the weight of the rabbit or was a specific concentration used for all weights?	

Review Form 3

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
