Journal Name:	<a href="#">South Asian Research Journal of Natural Products</a>
Manuscript Number:	Ms_SARJNP_125447
Title of the Manuscript:	Fungicidal Potentials of Leaf and Bark Extracts of Mimosa Pudica on Cowpea (Vigna Unguiculata L.) Seed Fungi.
Type of the Article	

### Review Form 3

#### **PART 1: Review Comments**

<b>Compulsory</b> REVISION comments	<b>Reviewer's comment</b>	<b>Author's Feedback</b> <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.</b>		
<b>Is the title of the article suitable? (If not please suggest an alternative title)</b>		
<b>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</b>		
<b>Are subsections and structure of the manuscript appropriate?</b>		
<b>Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.</b>		
<b>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</b> =		

**Review Form 3**

<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>		
<p>Optional/General comments</p>	<p><b>Key words:</b> review this section and complete</p> <p><b>2.3.4 Pathogenicity of isolated fungi</b> 1. This type of test would be reserved for phytopathogenic fungal species. In this work, you have isolated saprotrophic species with the exception of Fusarium, which can also behave like saprotrophic species. 2. Are cowpea grains mentioned higher up and watermelons lower down? What speculation have you been working on? 3. In 5 days, it is not possible to observe the symptoms in these conditions and for these crops. 4. This part of the theme is not important for this type of work.</p> <p><b>2.3.5 In vitro antifungal tests with plant extracts</b> This methodology is not clear, which makes it very difficult to read and understand. In view of the theme, this part is not important for this type of work.</p> <p><b>2.4 Statistical Analysis</b> Repeat this section, mentioning the data collected and the analyses used to separate the means.</p> <p><b>3.RESULTS</b> Table 1: Proximate composition of the fresh and spoilt cowpea seed samples and Table 3: Quantitative phytochemical composition of the ethanolic extracts of B. pinnatum, M.pudica and H. crepitans leaf and bark Review the table, clearly indicating the level of significance according to Duncan. Please review all the tables, captions and related comments. It would be very inter</p> <p>Fluconazole is an antibiotic, but why didn't you use a fungicide??? What type of extract is used in this work?</p>	

**PART 2:**

	<p><b>Reviewer's comment</b></p>	<p><b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p>Are there ethical issues in this manuscript?</p>	<p>(If yes, Kindly please write down the ethical issues here in details)</p>
