

Editor's Comment:

Editorial decision about the manuscript:

“Comparative Screening Of Elite Bivoltine Silkworm Breeds Under Summer Conditions Of Kashmir”

(Formerly: “Screening of some bivoltine silkworm breeds during summer season under Kashmir climatic condition)

The article proposed here covers an important point concerning sericulture. It was reread by three reviewers who appreciated the content. The reviewers gave a reasoned opinion proposing improvements to the manuscript. The authors took into account the comments and proceeded to correct their manuscript.

However, there remain a few points to improve before accepting the manuscript for publication.

Page 2. “In J&K, though there is scope”: write in full “J&K” (Jammu and Kashmir?)

Bibliographic references must be seriously checked and corrected if necessary.

In the list, the references which were in the first version of the manuscript (1. Ahmad et al, (5 and 6.Gamo et al) are no longer in the text of the second version: they must therefore be deleted.

Ref 21. Gao et al.: check and correct the year (20003?)

All references must be presented according to the journal's standards: they must be numbered in the text and arranged in the list according to their number. Please visit the journal's website and view a recently published article (<https://journalarrb.com/index.php/ARRB/about/submissions>)

Decision: accept after minor revisions.
