

Editor's Comment:

The research was accepted with substantial modifications and corrections.

Title may be modified to be "Vaginal hysterectomy for uterine inversion caused by uterine leiomyosarcoma: Case report" instead of the current "Vaginal hysterectomy for uterine inversion caused by uterine leiomyosarcoma about a case."

The medical language used in the research is weak and needs to be edited in English.

Figures should be referred within the text of case report.

First paragraph of discussion may be removed. There is no need for it.

Some references are missing complete data such as No. 1 and No. 10. Such reference should be followed by its website link.
