Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	It is a nice review about the history of hysterectomy; indications and approaches. The topic is discussing a rare type of manageable uterine malignancies well-known even if it is difficult in the diagnosis pre-operatively. The radiological tools with its different accuracies cannot accurately diagnose this rare type of malignancies.	
Is the title of the article suitable? (If not please suggest an alternative title)	No. I think (The changes in the approaches to hysterectomy over time; the role of indications and experience)	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract is very comprehensive but more details about the topic and the case should be mentioned to attract the readers to go through this manuscript.	
Are subsections and structure of the manuscript appropriate?	The introduction is very short and does not reflect the importance of the subject.	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	The contents of the subject is well-known and accurate pieces of information. Even though the authors were unlucky in the references of this manuscript. As long as hysterectomy is the main gynaecological procedure all over the world, this fact puts further burden on the authors on writing a scientific manuscript even if it is a case report.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	This is the most disappointing section in this manuscript. Most of it are old, incomplete to be reviewed, using non-English translated references and relying on thesis and books.	
Minor REVISION comments		
Is the language/English quality of the article suitable for scholarly communications?	It needs a minor English review especially in the punctuation.	
Optional/General comments	The reviews of the article need massive reconstruction to add recent references and to clarify the already mentioned ones. As an example, in reference number 2 nothing related to this manuscript.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
