

**Editor's Comment:**

I revised this article. The article could be published with some recommendations.

1. Enter the coordinates of the sampling location.
2. Use international units, not "hrs", correct "h".
3. No statistical analysis is described and is not reflected in the results. The authors must add it.
4. Figure 2 should be deleted since Table 3 contains the same results. Similar is with figure 1 and table 2, please select only one, or figure or table.

There is a lot of discussion missing in all analyses, not only indicating which was or obtained the best results, but also explaining a possible why.
