

Editor's Comment:

The authors have carried out the necessary corrections suggested by the reviewer. I have noted a few shortcomings. Hence, the paper can be ACCEPTED after carrying out the following suggestions and it does not require further review.

1. In the manuscript, in many places the authors used the term "V. colorata" and "V. conferta" and in few places it has given as "C. colorata" and "C. conferta" and it should be checked properly and corrected.

2. The figure legends are very short and cannot be read as stand-alone text. The authors should provide more information in the figure legends for non-experts.
