

Review Form 3

Journal Name:	Journal of Advances in Medicine and Medical Research
Manuscript Number:	Ms_JAMMR_122662
Title of the Manuscript:	A Study of Correlation of Vitamin B-12 Levels in Febrile Thrombocytopenia – Hospital Based Cross Sectional Study
Type of the Article	Original Research Article

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.		
Is the title of the article suitable? (If not please suggest an alternative title)		
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.		
Are subsections and structure of the manuscript appropriate?		
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.		
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.		

Review Form 3

<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>		
<p>Optional/General comments</p>	<p>There are some simple notes compared to the good work in this research, including:-</p> <ol style="list-style-type: none"> 1. This disease is considered an autoimmune disease that affects females more than males, and while reading I saw that males are higher than females. 2. The researcher mentioned here the severity of thrombocytopenia (ITP) . It is better to classify this severity according to the symptoms of the disease into simple, moderate and severe, with a link to a relationship in vitamin B12 levels, noting that he mentioned that vitamin B12 deficiency is associated with more severe thrombocytopenia. 3. It is better to mention the age groups and in which age group the decrease was seen. The effect of vitamin B12 is associated with more severe thrombocytopenia. 4. Were the patients taking medications? They are probably taking immune medications because some of these medications have a slight effect on the concentration of vitamin B12. 5. In reference No. 9, the latest source was 2018. It would be better to have a more recent source. 6. Taking into account the organization of the manuscript according to the model or protocol of this respected scientific journal. 7. Consider the percentage of plagiarism based on the requirements of your journal. <p>I see that the research plan, work, results, statistics and discussion were excellent and these above notes do not prevent the publication of such a manuscript because it expresses a personal opinion and I see that it gives support to the manuscript.</p>	

PART 2:

	<p>Reviewer's comment</p>	<p>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes. Kindly please write down the ethical issues here in details)</i></p>
