

The pursuit of doctoral studies in an African context

ABSTRACT

This paper discusses the pursuit of doctoral studies in an African context. Doctoral studies are not a new development worldwide. It has been reported that the first conferred doctoral degree was in at the University of Paris. This paper examines the situation of doctoral studies in Africa, the role of doctoral candidates/students, the role of supervisors, doctoral studies across the globe, and the challenges facing doctoral candidates in Africa. This paper argues/reveals that the role of a doctoral candidate is planning research, scheduling meetings, searching for literature, carrying out the research, drafting the thesis preparation, proofreading the thesis, writing the final thesis, submitting the final thesis, defending the final thesis, publishing the final thesis, and communicating the findings in the form of articles. Recommendations for quality doctoral programs in Africa have been provided. The conclusion is that the effort and input of supervisors also play a critical role in the quality of doctoral students who are turned out at any point in time. The future of research in the African context needs special attention.

Keywords: academic development; Africa; doctoral studies; doctoral supervision; education policy; higher education; research thesis; University.

1.0 INTRODUCTION

Doctoral studies are not new development phenomena in the world worldwide. Several universities have conferred doctoral degree certificates so far. It has been reported that the first conferred doctoral degree was in University of Paris. Thereafter/Now, several universities have obtained doctoral degrees in different fields Africa and all over the world all across the world including Africa.[1].

Doctoral education differs internationally [2–4]. Various models were used for training. The training was in research and/or in combination with coursework. However, they all aim to produce high-quality intellectuals with strong research backgrounds, who can contribute to national development. Consequently, every country uses the best resources available to train students at the doctoral level.

The title “doctor” is seen as prestigious and because it denotes a knowledgeable person in society. Many people in society give audiences and attention to people when they find that the person speaking has a doctorate/doctoral degree. Therefore, many more people have focused their attention on gaining doctoral certificates [5], especially in the business sector, religious leaders, and people in non-profit organizations. In the past, most people in Africa who had doctorates were in the older age group. The wearing of spectacles was synonymous with having a doctorate. Some see such people as extremely poor and do not have time for family and friends. This is because they were always seen reading in their libraries or in their laboratories busy performing experiments. Those who had doctorates were also very few and were mostly found in higher educational institutions such as universities or research institutions.

Considering the association of a doctorate degree and its relationship with old age and confinement to universities and research institutions, it appears that most business executives, business leaders, and people working in non-profit organizations were not interested in obtaining a doctorate degree. Most/Many business owners prefer to engage people with doctorate holders as consultants and will not employ them.

However, the doctorate has gained prominence and increased enrollment/enrolment in the Universities/universities around the world and the world [6]. Many universities today provide opportunities to train doctoral students [7].

2.0 RESEARCH CONTEXT

Doctorates have been a major requirement for teaching in African universities. If you do not have a doctorate, you cannot be accepted for a the teaching position in some universities. Furthermore, those who have joined the teaching staff of various universities without a doctorate are required to obtain the doctorate before specific time.

Comment [ir1]: There is a difference between a doctoral candidate and a doctoral student. Doctoral candidate is a post-degree phenomenon, while doctoral student is a during-degree phenomenon. University of Phoenix, Arizona summarizes these concepts in a very comprehensive manner. Please visit this link: <https://www.phoenix.edu/blog/doctoral-candidate-vs-doctoral-student.html#:~:text=Being%20a%20doctoral%20student%20involves,coursework%2C%20they%20become%20doctoral%20candidates.>

Comment [ir2]: A research paper «reveals», not argue.

Comment [ir3]: You just mentioned only one aspect, “role of a doctoral candidate”. You did not talk about your other examined areas like “situation of doctoral studies in Africa, the role of supervisors, doctoral studies across the globe, and the challenges facing doctoral candidates in Africa.”

Comment [ir4]: Do not be generic. Please directly mention and summarize your key recommendations.

Comment [ir5]: What kind of special attention is needed. Please clearly mention that attention.

Comment [ir6]: Who said this? In research you have to be specific about such a big claim because they are very controversial. Please provide the reference in order to shift the responsibility. It will make your research more appealing and real.

Comment [ir7]: University is a degree awarding institute, not a degree obtaining institute. Students obtain the degrees, while the universities confer the degrees.

Comment [ir8]: According to the rules of academic writing, you cannot switch the tense in a paragraph. So, please be careful about the switching of the tenses.

Comment [ir9]: First sentence of the paragraph is topic sentence. All the succeeding sentences are linked to it. In your topic sentence you talked about «doctoral education» but in the second sentence you talked about “training”. Education and training are two different concepts. They cannot be yoked together.

Comment [ir10]: It does not make any sense.

Comment [ir11]: What is this? You cannot start a new paragraph in this way. Please merge these two sentences with the previous paragraph.

Comment [ir12]: Train is not an appropriate word in this context.

This has put much more pressure on the need to obtain a doctorate and has led to recent demand and increase at that level of research.

~~It has been said that a doctoral degree has the object of research, and it is a complex, dynamic, and growing enterprise [8].~~ Research has shown that education at the doctoral level is not just an academic or professional ingenuity [9–12] but also contributes to national development in terms of human resources [13]. A nation can ~~develop progress~~ only if it invests in research and innovation. Therefore, research and innovation have attracted attention in recent years.

Comment [ir13]: Please rewrite this sentence. It becomes difficult to comprehend it.

Universities face difficulties in the ~~development of research~~. However, some difficulties that have been suggested to be addressed include scholarship funding, ongoing learning and professional networking and partnerships [14].

Comment [ir14]: What does it mean?

In this paper, the situation of doctoral studies in Africa ~~will be~~ examined under the doctoral studies, role of doctoral candidates, role of supervisor(s), doctoral studies across the globe, and challenges facing doctoral candidates in Africa.

Comment [ir15]: The research has been conducted. So, future tense will not be used.

2.1 Doctoral studies

In recent years, doctoral studies have gained recognition and a marginal increase in ~~enrollment enrolment~~ in Africa. ~~An example is South Africa, For example, South Africa~~ which has a marginal increase in enrolment due to the government ~~of South Africa supporting support~~ for doctoral studies and research [15–17]. In other African countries, there is ~~not much no such~~ support provided by the governments. ~~and~~ Therefore, fewer people are trained at the doctoral level.

2.2 Role of doctoral candidate

In carrying out research, doctoral candidates must work in tandem with their doctoral supervisor or supervisory committee. It is a period where independent research is expected, and the supervisor or supervisory committee only serve as mentor(s) ~~such that they can guide and provide directions~~ to provide research guidance. The roles of a doctoral candidate are planning the research, scheduling of meetings, search for literature, carry out the research and data analysis, draft Thesis preparation, proof reading of Thesis, writing the final Thesis, submission of final Thesis, defending of final Thesis (Viva voce), publication of the final Thesis, and ~~communicating the findings in the form of publication~~. Detail descriptions of what to do at each stage are provided in Table 1.

Comment [ir16]: Candidate or student?

Table 1: The roles of doctoral candidates in doctoral research process

No.	Roles	Details about what to do
i.	Planning the research	Planning the research enables the researcher to complete the training within the an agreed period from according to the rules and regulations set out by a graduate school or university in which the candidate is enrolled. This is usually made possible by having a timetable of the research indicating when literature would be searched, data is to be collected, data is to be analyzed, analyzing, interpretation writing the results, writing the discussion, writing the conclusions, and making recommendations. The plan and budget that would be used to accomplish the research is also written at this stage.
ii.	Schedule meetings of	Related to the plan is a schedule of meetings with the supervisor(s) for the guidance of work to completion. Depending on the availability of time of the supervisor(s) and the candidate's commitment, it can be bi-weekly biweekly, monthly, quarterly, and so on. During such meetings, the candidate and the supervisor(s) will review the progress of work and the way forward. It is advisable for the doctoral candidate to keep minutes of such meetings. The minutes serve several purposes, including guiding both the candidate and the supervisor, serving as a record for reference purposes, and helping the candidate to compile reports of progress of work and final reports depending on the requirements of the department or the university. Some employers who provide study leave with pay will sometimes require the candidate to provide periodic progress and a final report.

Comment [ir17]: Analyse=British, Analyzed=American

No.	Roles	Details about what to do
iii.	Search for literature Literature review	<p>Searching for literature and writing out the literature portion of the research is very important. Literature review is crucial to the research. This is because the candidate will get to know the gaps areas to work in and to find out what has been done in that area of research. After all, the candidate need not waste time and energy to work on something that has been done before and which would not add on to the existing knowledge.</p> <p>However, it is possible to build on existing research which would enhance the findings of previous research, since time will have elapse, and the research findings may be obsolete. After all, the main purpose of doing a doctorate is to come out with new findings that has not been carried out. In that case the research can be basic or applied.</p> <p>The literature search will also review reveals theoretical underlings of the research. When research has a theoretical underpinning, it enables other researchers to understand the viewpoints of the researcher.</p> <p>A very good literature search can be published as literature review or sometimes referred to as systematic reviews such that other researchers would understand all previous studies that have been conducted in that research and to show evidence of interventions which have been effective especially in medicine and health.</p>
iv.	Draft Thesis	<p>The preparation of the the draft Thesis is the responsibility of the doctoral candidates. Depending on the agreement with the supervisor(s), a candidate may have to provide the Thesis in terms of chapters and not as a whole draft. This is sometimes useful because it makes it possible to guide the candidate as they make progress rather than wait to receive a draft which that is completely out of order. Such candidates usually end up with what is referred to as a monograph Thesis.</p> <p>In cases where the Thesis is by bi-publication, the candidate will be guided to publish the required number of articles, which will be put together as the Thesis. This is referred to as Thesis by bi-publications.</p>
v.	Proof reading of thesis	<p>It is the responsibility of the doctoral candidate to proofread the Thesis before submitting itto their supervisor(s) or doctoral committee(s). A well written Thesis allows the supervisory team or supervisor to read through the thesis to understand the substance of the work, enables speedy responses from the supervisor(s), and thereby making it possible to work according to the schedule on the timetable. In fact, when doctoral candidates present poorly written work to their supervisor, it does not only lead to delays but can be annoying to read, and thereby attracting negative comments which should have been could be avoided.</p>
vi.	Write of final Thesis	<p>The candidate will need to write the final Thesis draft and submit it to the supervisor(s). The supervisor(s) will then go through and provide the necessary feedback. At the end, if supervisors are satisfied with the Thesis, they will then grant permission for the printing and submission of the Thesis. The preparation of the final Thesis is guided by the respective university rules and guidelines of doctoral supervision and specialty the submission of the final Thesis.</p>
vii.	Submission of final Thesis	<p>The final Thesis, after approval and printing, is submitted to the Graduate graduates school or Department, depending en upon the University regulations. Usually, candidates are expected to pay attention to the conclusions and recommendations, the font type, font size, spacing, number of words, number of pages, referencing style, type of binding, and the required number of copies to submit. In certain situations, the university will ask that the Thesis must be submitted with a soft copy of the work and/or deposited in a repository of the</p>

Comment [ir18]: Do not break the paragraph like this.

Comment [ir19]: A paragraph is a combination of different sentences.

Comment [ir20]: This is not an appropriate way of writing. Please change it.

No.	Roles	Details about what to do
		University library.
viii.	Defending of final Thesis Défense of the thesis Or Defending the final draft	The end of a candidate's research work is usually marked by a defense (Viva voce). This is where a candidate demonstrates that the work is original and that the candidate really owns the work. This is done by an oral presentation to a panel of examiners. Candidates who have worked on their Thesis by themselves usually will have fun and present their work with interest. It must be noted that the Defense of a Thesis can only happen if the candidate is successful in completing the written Thesis part. In some countries or universities, this there is a public presentation, however it is only the examiners who can ask questions and assessments. Usually after the defense, the candidate may have to excuse the panel, or the panel will go into a meeting in the absence of the candidate to decide whether the candidate is successful or not. Thereafter, the candidate and the panel of examiners, as well as the audience, come together, and an announcement is made on the outcome of the defense. Where the candidate is successful, a congratulatory message is given, otherwise, a failed candidate will have to prepare and defend the Thesis at another opportune time.
ix.	Publication of Final Thesis	It is the duty of the candidate to publish their thesis in their university's repository and as articles in peer reviewed journals. In some universities, it is a requirement to deposit the data from which the Thesis was prepared at the University library or the department of the candidate. The data is then kept for a specific period.
x.	Communication of Articles from final Thesis	This usually takes the form of presentations at conferences, seminars, scientific meetings, and research communities' meetings. However, it must be noted that in recent years there is has been a new trend where candidates must publish several articles before the graduation, and in some situations the Thesis is exclusively published by publications.

Comment [ir21]: Use a semicolon, not a comma.

Comment [ir22]: A full stop is missing.

Comment [ir23]: What is this?

Comment [ir24]: Use a semicolon, not a comma.

Comment [ir25]: There is a difference between the submission of the thesis to university's repository and publication. Please check it again.

2.3 Role of supervisors

Supervisors play a crucial role in mentoring, coaching, supervising, and guiding doctoral candidates. In certain countries, for example, in Germany, Austria and Switzerland, there is this doctor-father (*Doktorvater*) relationship in the training of doctoral candidates. Usually, supervisors recruit doctoral candidates and support or guide them to follow in their academic paths, with minimal guidelines from the university or research institution [16].

There are various methods that are used in training doctoral candidates across the world [18]. In Africa, the most common method used in training doctoral candidates is the single supervisor model. In this model, a candidate is assigned a main supervisor and one or two other supervisors. Most often the candidate deals directly with the main supervisor, and the other supervisor(s) gets involved at certain periods or when the candidate has prepared the draft.

The supervisor(s) provide the enabling environment to the doctoral candidate to carry out the research. This enabling environment is in the form of provision of office, access to reference materials, participation in seminars, and conferences.

The supervisor can also provide support letters to enable the candidate to source research funding for the research, funding for conferences, and other academic visits.

Comment [ir26]: It is not a paragraph; it is just a sentence.

2.4 Doctoral studies across the globe

There are different models that have been used by different countries in the training of doctoral candidates. Some of the models are classified into centers where transferring of specific research skills are conducted [19]. The models that award doctorate are classified into traditional, publication, taught, professional and work-based, and practice-based [20]. This classification can be in the form of an individual doctoral training or a doctoral training within a structured doctoral program in the case of the German system.

Comment [ir27]: British and American spelling issue.

In African countries, there have not been any such specific classification exclusive to the African context. However, different universities adopt the various models that are being used worldwide. In some universities, the recent development is that individual traditional doctoral training within the initial year has taught courses and seminars (for example, University of Ghana, Accra).

2.5 Challenges facing doctoral candidates in Africa

The challenges that doctoral candidates face can be categorized into availability of libraries, lack of offices, poor internet connectivity, unresponsive to work submitted to supervisor(s), candidate's commitment to their research, and lack of memorandum of understanding (MOU). This paper also looks at the challenges and provides suggested solutions to solve them. Table 2 shows the challenges and how to address them.

Table 2: Challenges and how to address the challenges of doctoral candidates in Africa.

No.	Item	Challenge	How to address it
i.	Library	Libraries are poorly resourced libraries. So, candidates are unable to find the needed published articles.	Universities should collaborate with other universities and philanthropic organizations to provide opportunities for candidates to have the needed research materials.
ii.	Lack of offices	On many occasions, candidates do not have offices to sit down and do their work.	There should be opportunities for candidates to have offices. If a university lacks office space, the university can create a common office where candidates can use it when the need arises. Such common offices can also offer the candidate an opportunity to interact and learn.
iii.	Poor internet connectivity	Most universities do not have internet access, or the internet quality is poor.	Reliable and high-speed internet is very important for research purposes. Universities should partner with Internet Service Providers (ISP) to give them discounts on their use. This is because the ISP will be interested because they can advertise themselves with those provisions.
iv.	Unresponsive to work submitted to supervisor(s)	There have been several reports of how unresponsive to the work submitted to supervisors is in some universities.	There should be regular meeting schedules for the successful progress of research. During these meetings, candidates must write minutes such that it would guide their future discussion of the work. Universities should also provide an avenue for candidates to discuss their progress on a periodic basis (quarterly, half yearly or annually). Candidates and supervisors should be made to write reports (quarterly, half yearly, or annually) of their research progress and supervision, respectively.
v.	Financial difficulties	Candidates are usually faced with funding for their research. Therefore, there are times there is a break in their research work due to lack of research funds.	Governments in Africa should provide research funding for candidates. Students should also look for external research funding support. Supervisors can also assist candidates with information on sources of funding for research.
vi.	Candidate's commitment to their research	There are times when there is no progress because there is no lack of commitment on the part of the candidate.	Candidates should have a written timetable to guide them in their doctoral studies. Supervisors should review these timetables to find out if they are on track.

No.	Item	Challenge	How to address it
ii.	Lack of Memorandum of understanding (MOU)	There is a lack of memorandum understanding of that will guide the researcher.	It will be a great idea to have a memorandum of understanding (MOU) to guide the research. This MOU will spell out the most important items that have to be accomplished by both the candidates and their supervisor(s).

3.0 KEY IMPACTS

3.1 Doctoral programmes in Africa

Doctoral studies worldwide is not an easy task. The recommendations for successful and effective doctoral studies programmes are the provision of well-equipped libraries, the provision of office space for doctoral candidates to study effectively, the provision of high-speed internet connectivity, training of supervisors(s) to realize the importance of providing timely feedback to their students, and governments in Africa providing funding for research at the higher level of education for doctoral studies.

3.2 Doctoral students in Africa

Doctoral students should recognize the fact that their research is important, and they should take responsibility for its success. The supervisor is only to serve as a guide, motivator, mentor, teacher, and to provide support. The credit for obtaining the doctoral certificate goes to the student.

The following are recommendations for doctoral students in Africa:

- i. hard work and dedicated to the research work,
- ii. the signing of a memorandum of understanding between the student and the supervisor(s),
- iii. effective planning to achieve the objectives of the research,
- iv. collaborative work to enhance sharing ideas and knowledge,
- v. involvement in presentations at seminars,
- vi. participating in conferences,
- vii. participation in workshops,
- viii. commitment to research plan,
- ix. joining research associations or groups.

4.0 IMPLICATIONS FOR POLICY AND PRACTICE

This material would contribute to the training of doctoral candidates in terms of their role, the role of their supervisors, and what can be done to improve doctoral studies and programmes in Africa.

Universities and research institutions will need to restructure their doctoral programmes to take care of the increase in demand.

Programmes in higher education for doctoral studies will need to be designed to take care of the current trend in the use of artificial intelligence (AI), machine learning, social media, cybersecurity, programming with purpose, digital marketing, and E-commerce.

5.0 CONCLUSION

The quality of doctoral programmes and graduating students in Africa depends on how the candidates see their role in the programme.

The effort and input of supervisors play an important role in the quality of doctoral students who are turned out at any point in time due to their roles as guidance, motivators, mentors, teachers, and supporters.

A comparison of doctoral studies programme across the globe is very important. After-all, one does not need to invent the wheel since that is already available since time in memorial. At the end, challenges facing doctoral students need to be addressed if Africa is to develop.
