Minor REVISIONcomments Isthe language/English quality of the articles suitable for scholarly communications?	Yes but by correcting minor grammar and sentence alterations	
Optional/General comments	Write the results for inhibition at different hours for both the pathogens and use some technical words and also use CD values for comparison. Write the reasons for maximum inhibition in both the treatments and also at different hours quote the reason for increase and decrease of mycelial growth. Mention the mode of action of the treatments that is used in this study. Mention the reason for the maximum inhibition was observed at 15% concentration in both the treatments and also write the cow urine and Trichoderma treatments importance in contrast to Propiconazole treatment, this is not at all mentioned in the result. Results and discussion part is not up to the mark. This section needs to be properly rewritten and importantly photographs should be included.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
