PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	According to article topic this is very important subject for pharmacological and non pharmacological sector. The title of the article play very important role in non pharmacological department.because according to this topics we are generate many useful thoughts in non pharmacology sector and this is a complete and comparative research topic.	
Is the title of the article suitable? (If not please suggest an alternative title)	Non pharmacological activity significant role venous thromboembolism prevention.	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Venous thromboembolism is a significant direct cause of maternal mortality worldwide. Most women who suffer from venous thromboembolism have identifiable risk factors and therefore it is considered a largely preventable condition. There are 2 main ways of preventing this, pharmacological and non-pharmacological. The main pharmacological means of preventing venous thromboembolism include the use of low molecular weight heparin. This is an expensive method and it is sometimes not available in most parts of low and middle income countries due to economic push and pull factors. Even when it is available, majority of the women are unable to afford it, and those who can, get inadequate treatment in form of inappropriate dose or duration of treatment. We shed light on the 3 non-pharmacological methods of prevention of venous thromboembolism and provide recommendations	
Are subsections and structure of the manuscript appropriate?	We are create more than 4 subsection and structure	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	There are 2 main ways of preventing this, pharmacological and non-pharmacological. The main pharmacological means of preventing venous thromboembolism include the use of low molecular weight heparin. This is an expensive method and it is sometimes not available in most parts of low and middle income countries due to economic push and pull factors. Even when it is available, majority of the women are unable to afford it, and those who can, get inadequate treatment in form of inappropriate dose or duration of treatment. We shed light on the 3 non-pharmacological methods of prevention of venous thromboembolism and provide recommendations	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	References are sufficient	
Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	Better	Better
Optional/General comments	Good work	Good work
