

Review Form 3

Journal Name:	Journal of Pharmaceutical Research International
Manuscript Number:	Ms_JPRI_124815
Title of the Manuscript:	In Silico Screening of Monkeypox Virus Drug Targets: Comparative Analysis of Natural Products and Repurposed Antivirals
Type of the Article	

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.</p>		
<p>Is the title of the article suitable? (If not please suggest an alternative title)</p>		
<p>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</p>		
<p>Are subsections and structure of the manuscript appropriate?</p>		
<p>Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.</p>		
<p>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</p>		
<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>		
<p>Optional/General comments</p>	<p>In Silico Screening of Monkeypox Virus Drug Targets: Comparative Analysis of Natural Products and Repurposed Antivirals In this paper the authors have performed the In-silico analysis of select natural compounds against a few important epitopes of Mpox virus. The results of the study are encouraging and as this entire study is Insilico, the recommendations in this study will be reality only after conducting experiments with actual virus invitro or invivo. These statements written in the paper should be re-written or deleted before publication MPXV poses a serious health threat, particularly because it has a higher fatality rate than smallpox and can cause severe symptoms, including painful skin lesions, respiratory distress, and systemic complications [2]. By targeting these critical proteins, researchers hope to develop therapies that will not only manage current outbreaks but also prevent future ones.</p>
