

Editor's Comment:

you for your invitation. The manuscript is good and concise. The references are not in one format and must be corrected to be in the same format. Ethical approval and patient consent are mandatory even in retrospective studies. There is a lot of research about this topic. The authors have addressed some of the reviewers' comments, but correction of the references' format, ethical approval and patient consent are mandatory before acceptance of the manuscript. Regarding the presence of many researches addressing this topic, the policy of the journal is not to reject any manuscript on basis of lack of novelty only

Thanks,

Fatma Mohammad Nasr
