

Editor's Comment:

Generally, the paper is well written and publishable.

Methods are mainly descriptive, but used correctly.

There are only minor issues left:

- Decimal symbol should be a point not a comma (throughout the paper)
- "Papanikos asserts" note that we have 2024, so the prediction that the economy would recover fully by 2022 can be verified or falsified now
- Below equation 4: "b" has two subscripts, "i" and "j".
