

### **Editor's Comment:**

This manuscript provides valuable information on the highest productivity in aman rice varieties in combination of aman rice variety with appropriate management practices across Bangladesh. I suggest that this manuscript can be accepted for the publication in the journal, ACRI after minor revisions as follows.

Comments:

1. Add grain yield (t/ha) to Table 2, 3 and 4.
2. Insert GY between BY and HI in the description on pages 3 and 4.
3. In Table 2, all the values are different at 1% significant level. The explanation about 5% significant level and NS is deleted from the footnote.
4. P4, L5: What is BARI GOM-32 which is not described as materials used in this study?
5. P4, L5-6: You mentioned that the lowest PH (101.15cm) was found in BRRI dhan49 with IP. However, The lowest PH (101.00cm) was found in BR11 with FP.
6. Small modification of subtitles like Preparation of plots and crop husbandry (P2), Effect of variety on grain yield and straw yield (P4), Effect of management practices (P5), Interaction effect of variety and management practices (P6)
