

**Editor's Comment:**

After a thorough review of the manuscript, I would like to emphasize the importance of this work to the scientific community.

The manuscript holds significant value as it sheds light on critical aspects of antibiotic resistance, which is of immense interest to medics and researchers in this field. It effectively underscores the diversity of the two bacterial strains and reveals the presence of resistance genes, which is crucial for developing effective treatment strategies and understanding bacterial behavior.

The research conducted is commendable, and it is clear that the authors have meticulously addressed the reviewers' suggestions. They have made substantial revisions to incorporate the provided comments, demonstrating a commitment to enhancing the quality of their work. Furthermore, proper proofreading has been carried out to minimize similarity issues and make the necessary corrections.

In conclusion, given the importance of the study and the authors' efforts to refine their manuscript based on constructive feedback, I strongly believe that this article is now ready for publication.
