

Review Form 3

Journal Name:	Journal of Advances in Biology & Biotechnology
Manuscript Number:	Ms_JABB_121928
Title of the Manuscript:	Recent Developments in Endocrinology of Silkworm, Bombyx Mori L.
Type of the Article	Review Article

General guidelines for the Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guidelines for the Peer Review process, reviewers are requested to visit this link:

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<p>Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.</p>	<p>The work is very well oriented, however, although the multiple editorial details are not relevant because they are minor, the work is well formulated, since the research guides us to a study in which hormones exert specific actions on the growth and development of silkworms thus involving a large amount of hormones for its process.</p> <p>This work should be published immediately after making the final minor adjustments since its argument regarding the amount of hormones involved in the metamorphosis process of the silkworm is very good.</p> <p>Yeah! The Manuscript is important to the scientific community as well as solid since it refers to how the silkworm metamorphosis process is influenced by different hormones.</p>	
<p>Is the title of the article suitable? (If not please suggest an alternative title)</p>	<p>In my opinion, the title of the article is in line with what was done in the study.</p>	
<p>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</p>	<p>The summary perfectly details in detail what was done in the article, as well as the data reflected in the tables.</p>	
<p>Are subsections and structure of the manuscript appropriate?</p>	<p>The structure of the manuscript is appropriate.</p>	
<p>Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.</p>	<p>Yes, it is scientifically correct and sound. This manuscript presents a real study on the development of the silkworm, Step by Step.</p>	
<p>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</p>	<p>The References used in the article are those necessary. And even in studies you can use a few. This has a better presentation if it is numbered in bold.</p>	
<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>	<p>The details are easy and quick to correct to give a better meaning to the writing of the article and thus expand its understanding, without giving relevance to the number of corrections detected and improved in order to perfect this article to be published.</p> <p>The English language is perfectly adequate for academic communications.</p>	
<p>Optional/General comments</p>	<p>Examine the article carefully before publishing it, since the corrections, although few, do not affect the publication, therefore the final touches must be refined so that the satisfactory publication is carried out in favor of knowledge about the endocrinology of the silkworm.</p> <p>This article shows us a study process by which the performance of hormones in the metamorphic process of the silkworm is specified.</p>	

Review Form 3

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
